

Energy Technology Services LLC

Introduction

Energy Technology Services (ETS) is a technical consulting group focused on the development of distributed energy.

ETS is an integrated team of 18 senior engineers and managers with 600 years of industrial experience in fuel cells, hydrogen generation, fuel processing, power conditioning, and power management and integration technology.

Our fundamental mission is to accelerate the development of distributed energy – for development companies, public agencies, OEMs, and investment firms.

Capabilities

Our comprehensive capabilities range from front-end market assessment and business planning to manufacturing and field service. Our core strength is power plant system engineering, including fuel cell and stack development, fuel processing, electrical systems, components engineering, and packaging.

Approach

We apply a market-based, requirements-driven, and systems approach to solve technical and commercial problems. ETS consultants have worked successfully together for decades. We provide practical, unbiased expertise in ways that flexibly complement the capabilities and resources of our customers.
